Ted Mack

To whom it may concern,

About a year and a half ago, while Schlueter Plumbing was at our station doing some maintenance work,

The technician, Tim mentioned that he had a solution to our severe limescale problems. At that time our drinking fountain had a very ugly off-white buildup on it, and several of our shower valves were so hard to turn that we could barely use them.

We took Tim's advice and went with a Hydroflow 100 unit.

The first thing we noticed after the installation was that within a few weeks the drinking fountain had started to clean up and looked much more appealing to drink from. Over a month or so the shower valves became much easier to operate, and the water flow has increased dramatically. Also the "crusties" are gone from the shower heads.

We have realized significant financial savings due to the decrease in the need for plumbing maintenance work.

We would highly recommend the use of Hydroflow technology to anyone who has limescale issues.

Sincerely,

Sharonville fire dept.
