

Hydro FLOW USA Wins 2015 Kitchen Innovations Award

Redmond, WA - *HydroFLOW USA* is excited to announce that it was recently awarded the prestigious 2015 Kitchen Innovations award by the National Restaurant Association. The Kitchen Innovations Awards recognizes and celebrates cutting-edge equipment and technology that specifically improves the back of the house operations and benefits foodservice operators.

In an industry that has over a million restaurant and foodservice outlets, there is a continuously renewed focus that reflects the developments in food safety, environmental impact, and equipment efficiency. Companies are progressively looking for new ways to reduce their burden on the environment and its resources on a day-to-day basis. *HydroFLOW* technology does not simply support this focus, but is vigorously working to solve these challenges and advance the food service industry.

“Since opening the Sacramento Melting Pot in 2003, we have always looked for ways to control costs while at the same time supporting the environment. Over the years we have tested and implemented many different products and services; including low-temp dishwashers, LED lighting, waste recycling, Ionized cleaning and many more,” said The Melting Pot-Sacramento Proprietor, Michael Frampton. “Our investment in the *HydroFLOW S38* was less than \$1,000, which we expect to save in just over 14 months by not using water softener. Not only will we save money, but we will also reduce our water usage.”

HydroFLOW uses patented technology that induces an electric signal into the piping and or plumbing system to continuously condition the liquid solution throughout the entire system. Designed for ease of installation, the water-resistant units simply attaches around the pipe and are connected to a power supply. In order to accommodate businesses of all types, *HydroFLOW* offers a variety of sized units that have the ability to fit pipes of all ranges and material.

About the company:

HydroFLOW USA is an American-owned company which distributes one-of-a-kind, environmentally friendly water conditioners. The use of induction technology provides companies with a chemical free solution that continuously conditions the water throughout an entire plumbing system. The patented *HydroPath* technology was originally designed over 20 years ago, however, with many years of intense international research, *HydroPath* Technology has evolved into a world-leading technology which provides chemical-free solutions to a diverse range of industries.
